Allowable Subject Matter

1. Claims 43 – 44, 46, 56, 61 – 65 and 67 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Miyata et al. (US 2002/0033789 A1) teaches a liquid crystal display device carrying out tone display with pixels by applying a tone voltage according to tone data to each pixel in each frame, and includes: an LUT memory, which receives tone data of a display frame and tone data of an immediately preceding frame, for converting and outputting the tone data of the display frame.

Usui et al. (US 5,347,294) teaches an image display circuit comprising a table ROM with data of generated gray scale data greater (overshoot) than the gray scale of the current video signal (Usui: Col. 1, lines 45 – 60) and a plurality of ROM Tables provided in association with different temperature (Usui: Col. 6, lines 15 - 18.).

Shimada et al. (US 5,801,673) teaches a liquid crystal display device wherein an overshoot and an undershoot are added by the data signal generating circuit to portions of a waveform of a data signal (Shimada: Col. 13, lines 50 - 56.).

However, none of the prior art of record teaches the newly added limitation "wherein the optimum one of the display results is a display result of the display results where the attainment tone is substantially displayed faster than a

remainder of the display results without exceeding the attainment tone." In other words, none of the prior art of record teaches the specific steps of obtaining a plurality of tested attainment tone without any calculation to select an optimum attainment tone which is faster than the rest or remaining tested attainment tone results.

Therefore, the claims indicated to be allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
